Foreign Language and Literature Direction 1st year student

Abstract

Today technology is becoming more important in education. Many students use modern applications and online platforms to learn English. Artificial Intelligence helps learners improve speaking, writing, listening, and vocabulary skills. This article explains how AI is used in English learning and why it is useful for students and teachers.

Keywords: Artificial Intelligence, English learning, technology, education, online learning, digital applications and others.

Introduction

Nowadays English is one of the most popular languages in the world. People learn English for study, work, travel, and communication. Because of this, many students in our university need modern and interesting ways to learn the language.

In recent years, Artificial Intelligence has become very popular in education. Many learners use AI applications every day. These technologies help students practice English more easily and comfortably. In my opinion, AI is making language learning more interesting and effective for young learners.

The Role of AI in Learning English

Artificial Intelligence helps students in different ways. First of all, learners can use AI programs anytime. They do not need to wait for lessons at school or university. Students can practice English at home, in the library, or even while travelling.

Another important advantage is that AI helps students work independently. Some learners are shy during lessons and are afraid of making mistakes. From my experience, AI applications give them a chance to practice without stress. This helps students feel more confident.

For instance, many students use ChatGPT to ask grammar questions, learn new vocabulary, and practice writing. Grammarly helps learners correct grammar and spelling mistakes. Duolingo makes learning more interesting through games and small tasks.

AI is also useful for pronunciation practice. Some applications can listen to students' speech and show pronunciation mistakes. Because of this, learners can improve their speaking skills step by step. That's why this is extremely important for our study.

Advantages of Artificial Intelligence

There are many positive sides of using Artificial Intelligence in English education.

Firstly, AI saves time. Students can quickly find information, translate words, and check mistakes. Teachers can also prepare lesson materials more easily.

Second, AI makes lessons more interactive. Young learners usually enjoy technology, games, and online activities. As a result, students become more active during lessons.

Third, AI supports individual learning. Every student has different abilities. Some students learn grammar faster, while others need more speaking practice. AI programs can help according to students' needs.

From my perspective, one of the best things about AI is convenience. Students only need a phone or computer with internet access to continue learning.

Disadvantages of AI

Although Artificial Intelligence has many benefits, there are also some disadvantages.

Sometimes students depend too much on technology. But it is not good. They may stop thinking independently and use AI for every task. This is not always good for learning.

And there is another problem is that AI can make mistakes. Some translations or answers may not be completely correct. Because of this, students should not trust every answer automatically.

Additionally, technology cannot fully replace teachers. Teachers motivate students, explain topics emotionally, and communicate with learners in real life. Human interaction is still very important in education.

Conclusion

To summary, Artificial Intelligence is becoming an important part of English language learning. AI applications help students improve their skills in easier and more interesting ways. Technology gives learners more opportunities for practice and independent study.

At the same time, students should use AI correctly and responsibly. I personally think, artificial Intelligence should support education, not completely replace teachers. I believe AI will continue to play a big role in the future of English education.
